THE STRONGEST
BEACH FLAG

The trendy beach flag: Aventos

Aventos is flying high. Immediately since the introduction.

It is the unrivalled strongest beach flag available on the market. However the flag flies on many different locations as well. Indoors as well as outdoors. This is not surprising since this contemporary flag variant has many advantages. With its strong aluminium frame (much stronger than the often used boom) and its fabric, which is printed through-and-through, it appears to be fully unruffled and aesthetic. It is light-weight and therefore can be set-up in an easy manner. It is suited for all stands and not unimportantly, it is very attractive priced. In other words, Aventos can be used for numerous occasions. And it shows.

**Eco - Friendly
Advertising Fabric**

Technical specifications

- Frame consists of 4 individual elements, which can be mounted to a perfect fit.
- Material thickness of tube 1.2 mm.
- Diameter of the aluminum element 25 mm.
- Arch width : 60, 70 cm and 90 cm.
- Modular set-up, easy to extend: 1 additional pole element - construction height increase of 95 cm.
- Fabric seams or cut at full length. Elastic tunnelling tape in black or white
- A number of floor pins, stands, base plates and feet (which can be filled with water) as the basis.
- Polyester fabrics can be 100% recycled for re-use
- Dyes used are waterbased and do not contain any heavy metals or VOC's.

All the Aventos advantages at a glance:

- Significantly stronger and more stable than rib-frames or booms.
- Durable frame. Made of aluminium, with the highest material-thickness.
- Mobile and light weight. Easy set-up guaranteed.
- Suited for all types of stands.
- Rotating 360 degrees.
- Fabric printed through-and-through.
- Fabric can be 100% recycled for re-use.

Ready-to-use options

Art.No. 7586 Luxurious carrying bag. Length 130 cm. Marine blue. Polyester.

Disclaimer: The Aventos framers are much stronger than rods and are made of (1.2mm) thick-walled aluminium. However, the structure cannot withstand constant winds of wind-force Beaufort 5 or higher. This particularly applies to frames of 4 meters and over. The Aventos should therefore be used as a semi-permanent display. The supplier is not liable for any undue force applied (e.g. frame blocking)
